

Healthcare

Theft of personal items and medical equipment in hospitals is common. Guard your healthcare facility from theft & vandalism, at a fraction of the cost.

At an alarming rate, thieves are finding ways to steal high-value parts from hospitals and healthcare facilities, such as medical equipment, patient records, and personal items of the patients and staff. It is imperative that healthcare offices implement proactive security at their facilities.

Virtual Guarding can monitor patient rooms and common areas 24/7, ensuring immediate response to any signs of distress or emergencies. With Virtual Guarding, it eliminates the need for physical contact, significantly reducing the likelihood of infections and viruses spreading within the healthcare facilities.

Virtual Guarding offers 24/7 surveillance of your healthcare facility by utilizing remote guard monitoring from a central security operations center. With our remote guarding services, your building receives a team of live virtual security guards that monitor your facility, without the physical security guard cost normally associated with hiring a security guard company.

Security Features

Loitering

Keep a close watch on who enters & exits your property.

Break-In

Identify and stop forced entry before it occurs.

Vandalism

Keep potential damage away from your property.

Theft

Protect your business assets from theft.

Unwanted

Keep protected areas safe by keeping unwanted visitors away.

Unhealthy

Ensure anyone who enters does not pose a health threat.

Intelligent live video monitoring for healthcare facilities.

Virtual Guarding provides 360 degrees of security monitoring for healthcare facilities. We begin by establishing an invisible perimeter around your property with our high-definition security cameras, and then monitor those cameras live with our hybrid use of human intelligence and artificial intelligence. These virtual security guards are stationed at our Global Fusion Center to monitor your property 24/7.

Our hardware incorporates advanced features such as immediate live audio trespasser deterrents, remote door monitoring for unsecured entrances and exits. Our 4 step process, developed over years in the industry, enables our agents to respond up to 10x faster than traditional intrusion systems that may not even see incidents occurring until several minutes after they have already occurred.

With this as the new standard for healthcare facilities monitoring and security, are you protecting your inventory, staff, and property effectively? Get a quote today and find out how Virtual Guarding can help.

Our Services
